Testing 2, 3, 4

Maximizing success of user acceptance testing on BI projects, part 2

Business Intelligence projects are managed using a variety of software development life cycles. User acceptance testing (UAT) activities are a critical part of any BI project lifecycle, because they are usually the final set of testing activities before the project is signed off and deployed into production.

Part 1, I discussed the many challenges faced during the UAT phase of BI projects. Part 2 examines how to address and overcome those challenges as well as how to maximize the success of UAT.
