

Let Hitachi Consulting take you to the Cloud

There are many reasons why you should invest in Windows Azure-enabled applications, including enhanced performance, increased efficiency, and lower costs.

Hitachi Consulting's Cloud Foundry for Windows Azure solution is a set of offerings designed to help you quickly and easily assess, plan, and develop applications for the Cloud.

And, Hitachi Consulting is the experienced provider with the knowledge, scale, and experience to help you execute successfully.

Cloud Foundry

Powered by Microsoft Windows Azure

Heading to the Cloud?

Microsoft's Windows® Azure cloud computing platform allows enterprise organizations to create secure and highly scalable applications for line of business and core back-office systems. As more and more enterprises make major investments in Azure-enabled applications, they need trusted partners with the knowledge, scale, and experience to help them execute successfully.

Hitachi Consulting understands the challenges that the Cloud represents. New ways of building and deploying applications, different testing models, and new and challenging infrastructure and security considerations all require the expertise that we can provide.

Hitachi Consulting is committed to offering strategic, cost effective cloud computing solutions on the Microsoft Azure platform. As always, we bring a balanced view of strategy, people, process and technology to our solutions that allow us to provide the highest-value services and proven solution delivery.

Only Blue Skies with Azure Factory

Hitachi Consulting's Cloud Foundry solution for Windows Azure is a comprehensive set of offerings designed to help you assess, plan, architect, develop, and deploy applications to the Cloud. Our service components combine business and application analysis and Azure design and architecture, with a low-cost, scalable, and dependable delivery engine and global delivery network.

Clients who leverage Cloud Foundry for Windows Azure experience higher quality, better ROI, and more consistent results for strategic Cloud projects. Hitachi Consulting's offering consists of:

Cloud/Azure Assessment

- Review current state (public/private considerations, cost models, etc.)
- Define business case
- Document Azure migration roadmap

Architecture and Design

- Design Azure solution and application architecture
- Create use cases
- Create seamless transition to development factory
- Manage program/project

Cloud Foundry

- Develop/Migrate applications to Azure platform
 - Certified trained Azure resources
 - Azure delivery methodology, tools, and accelerators
 - Global delivery network
- Quality assurance and testing
 - Performance, cost modeling, cloud optimization

Application Delivery

- Managed services to support new Azure application
- Transfer solution knowledge (mentoring and skills transfer)

Experienced Partner, Global Delivery Network

Our Cloud Foundry solution was developed and is supported by seasoned Hitachi Consulting professionals who bring a wealth of experience and understanding of Microsoft technology and the Azure platform. Our global delivery network includes onshore and offshore architects and developers who use industrialized delivery processes and tools to support migrating to, and building in, the Microsoft Azure cloud.

Our sourcing capability can also provide long-term cloud application support. This model accelerates development and reduces application support costs.
