- In-depth knowledge related to all aspects of Business Intelligence and Performance Management solutions
- Financial Services Industry and business experience, insights, and context

We invite you to contact us to further discuss how Hitachi Consulting can team with you to successfully implement or improve your Business Intelligence and Performance Management solutions.

Successfully Implementing Enterprise Data Management and Business Intelligence Solutions

Background

Financial institutions increasingly rely on timely insight into reliable and consistent information that's easily consumable. The rate of change in this highly competitive and regulatory environment requires a dedicated focus on the ability of an organization to be responsive to its information needs; not be constrained by a rigid infrastructure, poor data quality or limited analytic capabilities of business unit and organizational performance. Successfully implementing Business Intelligence and Performance Management (BIPM) Solutions and delivering impactful change requires a breadth of discipline equally across the technical, functional, and organizational facets of a company.

Hitachi Consulting has worked with numerous clients to address all aspects of Business Intelligence and Performance Management capabilities and processes and has helped enhance the ability to capture the full benefits of a successful implementation.

Critical Areas of Focus

The scope of BIPM-related activities underscores the breadth and value of implementing these solutions. We can assist in aligning the strategic needs of the business with the maturity of the information landscape to develop Business Intelligence and Performance Management solutions that range from foundational infrastructure to predictive modeling, and analytics.

Focusing on critical business needs, Hitachi Consulting can assist you in identifying and meeting your goals and leveraging your current information assets.

Strategic Reporting and Performance Management

- Static, interactive, and ad-hoc reporting and analytic applications
- Operational and strategic performance metrics
- Scorecard and dashboard implementation tailored for process and business domains
