

Hitachi Smart Spaces & Video Intelligence

Hitachi Smart Space & Video Intelligence leverages video, IoT, analytics, and AI technologies to deliver insights, and help public and private organizations become more effective and improve quality of life.

The world is changing quickly, with disruptive technologies accelerating the rate of change and increasing complexity, while safety and security is a top concern for all organizations. Businesses and organizations need to leverage technology to stay competitive, deliver the experiences their stakeholders expect, and keep people and property safe.

Hitachi Smart Spaces and Video Intelligence leverages IoT and video data, secures data storage and management, along with data blending, analytics and digital tools. The solution delivers insights, enables machines to automate tasks effectively and empowers people to make smarter decisions.

Key Benefits

- Improve safety and security with automated alerts, faster response capability, and improved situational awareness.
- Achieve operational excellence, increase efficiency, and reduce costs through intelligence.
- Enhance experiences with responsive spaces, while increasing quality of productions and services.
- Understand behavior and trends to optimize space utilization, messaging, and business operations in physical environments
